1. Introduction

In the implementation of the website I used the following languages:

- HTML for the structure
- CSS for the design
- JS for some dynamic elements on the pages, like the image slideshow on the front page
- PHP for making the connection between the forms placed on the website, the one from the Book now page and the one from the Contact Us page, and the database in phpMyAdmin

In order to implement the project I used the following programs:

- PhpStorm for writing the code
- XAMPP for generating a localhost database
- phpMyAdmin for creating and administrating the database

2. Description of used languages

HTML

The HyperText Markup Language or HTML is the standard markup language for documents designed to be displayed in a web browser. It can be assisted by technologies such as Cascading Style Sheets (CSS) and scripting languages such as JavaScript. Web browsers receive HTML documents from a web server or from local storage and render the documents into multimedia web pages. HTML describes the structure of a web page semantically and originally included cues for the appearance of the document.

CSS

The HyperText Markup Language or HTML is the standard markup language for documents designed to be displayed in a web browser. It can be assisted by

technologies such as Cascading Style Sheets (CSS) and scripting languages such as JavaScript. CSS is designed to enable the separation of content and presentation, including layout, colors, and fonts.

JS

JavaScript or JS, is a programming language that is one of the core technologies of the World Wide Web, alongside HTML and CSS. As of 2022, 98% of websites use JavaScript on the client side for webpage behaviour, often incorporating third-party libraries. All major web browsers have a dedicated JavaScript engine to execute the code on users' devices. JavaScript is a high-level, often just-in-time compiled language that conforms to the ECMAScript standard. It has dynamic typing, prototype-based object-orientation, and first-class functions. It is multi-paradigm, supporting event-driven, functional, and imperative programming styles. It has application programming interfaces (APIs) for working with text, dates, regular expressions, standard data structures, and the Document Object Model (DOM).

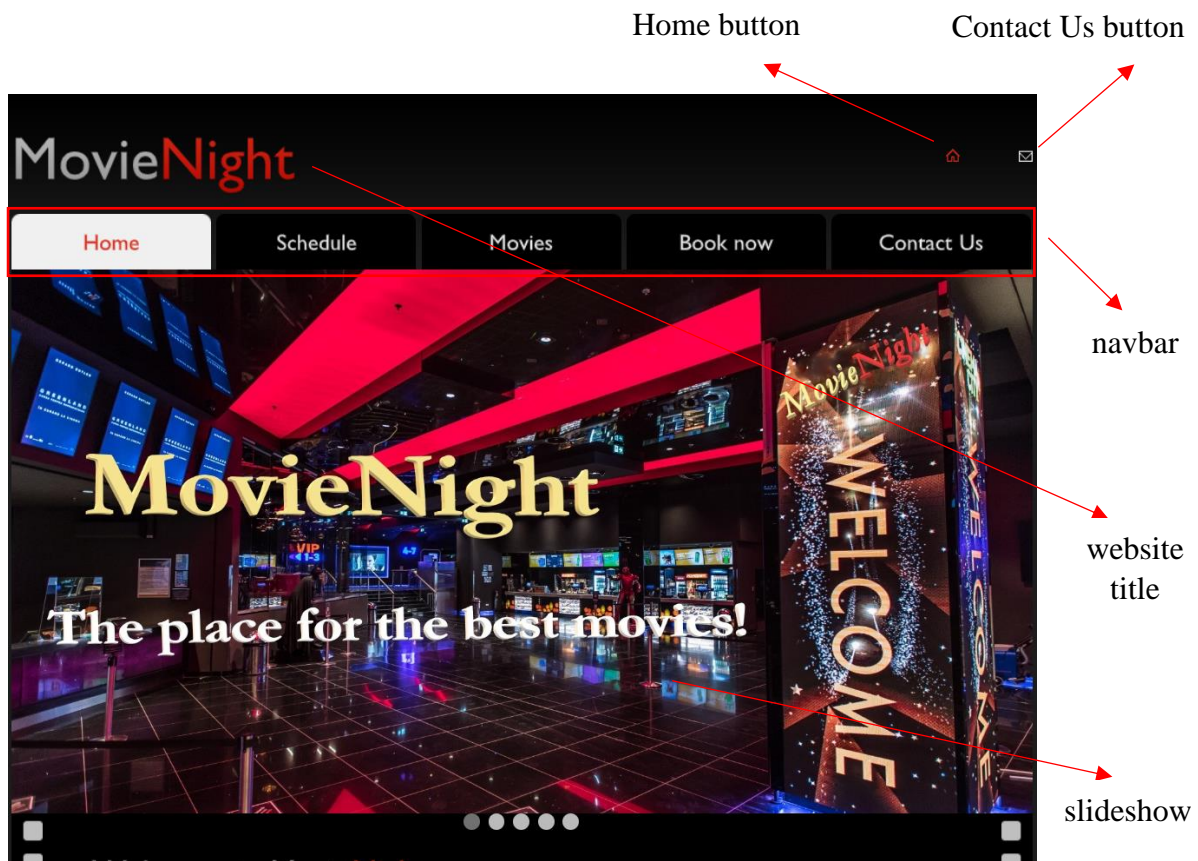

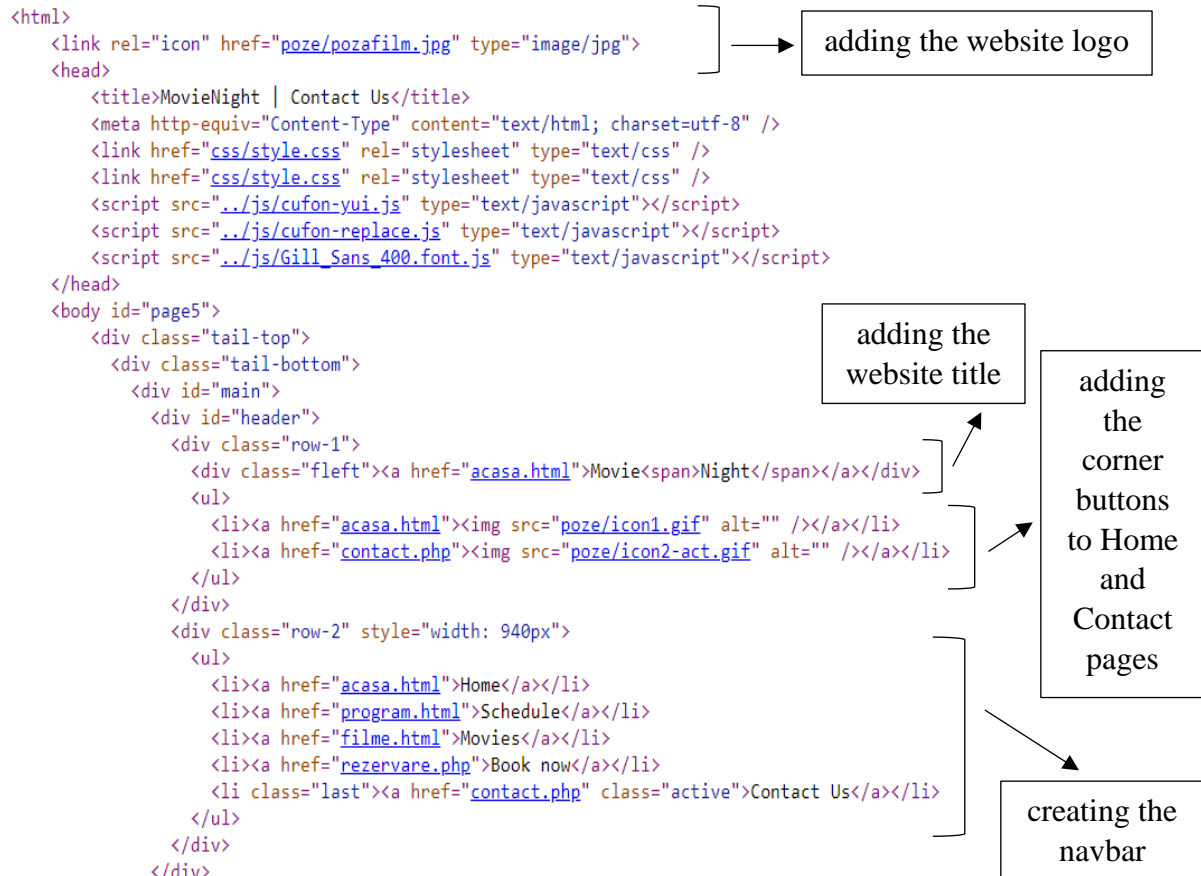

PHP

PHP: Hypertext Preprocessor or PHP is a general-purpose scripting language geared toward web development. PHP code is usually processed on a web server by a PHP interpreter implemented as a module, a daemon or as a Common Gateway Interface (CGI) executable. On a web server, the result of the interpreted and executed PHP code – which may be any type of data, such as generated HTML or binary image data – would form the whole or part of an HTTP response. Various web template systems, web content management systems, and web frameworks exist which can be employed to orchestrate or facilitate the generation of that response.

3. Code snippets

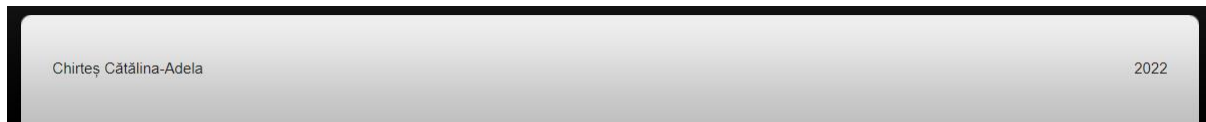

3.1. Navbar HTML code

Below is attached the HTML code common for all the pages of the website which adds the logo of the website, creates the navbar and the two navigation buttons from the top right corner.

3.2. Footer code

Below is attached the HTML and CSS code common for all the pages of the website which creates the footer of the website consisting of the name of the author and the creation year.

```
<div id="footer">
  <div class="left">
    <div class="right">
      <div class="footerlink">
        <p class="lf">Chirteş Cătălina-Adela</p>
        <p class="rf">2022</p>
        <div style="clear:both;"></div>
      </div>
    </div>
  </div>
</div>
```

HTML code for the footer

```
#footer {
  background:#bfbfbf url('../poze/footer-tail.gif') repeat-x left top;
  color:#1d1d1d;
  font-size:.86em;
  line-height:1.667em;
  text-align:center;
}
#footer .left {
  background:url('../poze/footer-left.gif') no-repeat left top;
}
#footer .right {
  min-height:89px;
  height:auto !important;
  height:89px;
  background:url('../poze/footer-right.gif') no-repeat right top;
  text-align:center;
}
#footer .footerlink {
  padding:35px 25px;
}
.footerlink p {
  margin:0;
  padding:0;
  line-height:normal;
  white-space:nowrap;
  text-indent:inherit;
  color:#1d1d1d;
}
.footerlink a {
  color:#1d1d1d;
  font-weight:normal;
  margin:0;
  padding:0;
  border:none;
  text-decoration:underline;
  background-color:transparent;
}
.footerlink a:hover {
  color:#1d1d1d;
  background-color:transparent;
  text-decoration:none;
}
.footerlink .lf {
  float:left;
}
.footerlink .rf {
  float:right;
}
```

CSS code for the footer

3.3. Home Page slideshow code

Below is attached the HTML, CSS and JavaScript code used for creating the slideshow situated on the Home Page.

```
<div class="slideshow-container">
<div class="mySlides fade">
  
</div>
<div class="mySlides fade">
  
  <div class="text">Modern, clean and comfortable movie theaters.</div>
</div>
<div class="mySlides fade">
  
  <div class="text">The perfect place to hang out with your friends and family.</div>
</div>
<div class="mySlides fade">
  
  <div class="text">Here you find the newest and the most popular movies out.</div>
</div>
<div class="mySlides fade">
  <div class="numbertext">5 / 5</div>
  
  <div class="text">Popcorn, drinks and snacks at accessible prices.</div>
</div>
</div>
<div style="text-align:center">
  <span class="dot"></span>
  <span class="dot"></span>
  <span class="dot"></span>
  <span class="dot"></span>
  <span class="dot"></span>
</div>
```

HTML code

```
<script>
var slideIndex = 0;
showSlides();

function showSlides() {
  var i;
  var slides = document.getElementsByClassName("mySlides");
  var dots = document.getElementsByClassName("dot");
  for (i = 0; i < slides.length; i++) {
    slides[i].style.display = "none";
  }
  slideIndex++;
  if (slideIndex > slides.length) {slideIndex = 1}
  for (i = 0; i < dots.length; i++) {
    dots[i].className = dots[i].className.replace(" active", "");
  }
  slides[slideIndex-1].style.display = "block";
  dots[slideIndex-1].className += " active";
  setTimeout(showSlides, 5000);
}
</script>
```

JavaScript code

```
* {box-sizing:border-box}

* {box-sizing: border-box;}
body {font-family:Arial, Helvetica, sans-serif}
.mySlides {display: none;}
img {vertical-align: middle;}

.slideshow-container {
  max-width: 1000px;
  position: relative;
  margin: auto;
}

.text {
  color: #f2f2f2;
  font-size: 18px;
  padding: 8px 12px;
  position: absolute;
  bottom: 8px;
  width: 100%;
  text-align: center;
}

.numbertext {
  color: #f2f2f2;
  font-size: 12px;
  padding: 8px 12px;
  position: absolute;
  top: 0;
}

.dot {
  height: 15px;
  width: 15px;
  margin: 0 2px;
  background-color: #bbb;
  border-radius: 50%;
  display: inline-block;
  transition: background-color 0.6s ease;
}

.active {
  background-color: #717171;
}

.fade {
  -webkit-animation-name: fade;
  -webkit-animation-duration: 1.5s;
  animation-name: fade;
  animation-duration: 1.5s;
}

@-webkit-keyframes fade {
  from {opacity: .4}
  to {opacity: 1}
}

@keyframes fade {
  from {opacity: .4}
  to {opacity: 1}
}

@media only screen and (max-width: 300px) {
  .text {font-size: 11px}
}

.slide {
  width: 67.25em;
  height: 35.76em;
}
```

CSS code

3.4. Schedule Page table HTML code

Below is attached the HTML code used for creating the schedule table containing information regarding the name of the movies, their rating, language, genre, duration and playing time.

```

<tr style="background: grey">
  <td style="width: 19% align="center"><a href="The Northman.html">The Northman</a></td>
  <td style="width: 4%; height: 22px;" class="auto-style1">N-15</td>
  <td style="width: 6%><div align="center">ENG</div></td>
  <td style="width: 5%><div align="center">2D</div></td>
  <td style="width: 5%; height: 22px;" class="auto-style1">137</td>
  <td style="width: 4%><div align="center"></div></td>
  <td style="width: 4%><div align="center"></div></td>
  <td style="width: 4%><div align="center">13:45</div></td>
  <td style="width: 3%><div align="center">15:00</div></td>
  <td style="width: 4%><div align="center">16:30</div></td>
  <td style="width: 4%><div align="center"></div></td>
  <td style="width: 4%><div align="center">21:30</div></td>
</tr>
<tr>
  <td style="width: 19% rowspan="2" align="center"><a href="The Bad Guys.html">The Bad Guys</a></td>

AG - General admission

AP-12 - Parental guidance for children under the age of 12

N-15 - Parental or tutor presence required all along the movie screening for children under the age of 15

Each name represents a button, and by pressing it you get redirected to the individual page of the movie containing more information and also the YouTube trailer.

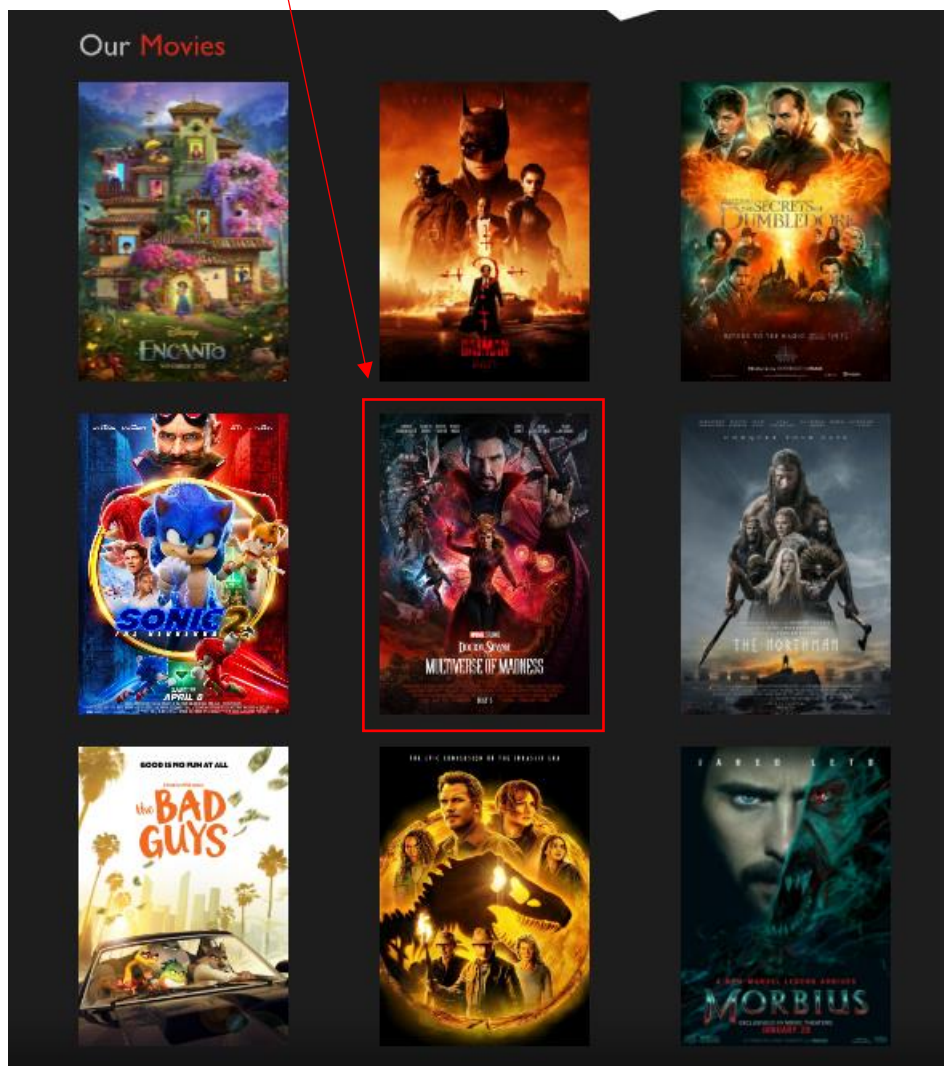

3.5. Movies Page HTML code

Below is attached the HTML code used for creating the Movies Page, with the poster placement, each poster being a button to the individual page of the movie.

```
<div class="content" style="padding: 10px 0px 30px 50px;">
  <h3 style="margin-left: 15px">Our <span>Movies</span></h3>
  <ul class="filme">
    <li><a href="Encanto.html"></a></li>
    <li><a href="The Batman.html"></li>

    <li><br /></li>
    <li class="last"><a href="Jurassic World Dominion.html"></li>
    <li class="clear"><br /></li>
    <li><a href="Morbius.html"></li>
  </ul>
</div>
</div>
```

Creating the button that sends us to the page of a movie

the button that sends us to the page of a movie

3.6. Individual Movie Page HTML code

Each movie has an individual page where we can find information about the plot of the movie, the duration, the available languages, the cast, the director and the trailer on YouTube. All the pages have the same structure. Below is attached the HTML code used for creating the page for the movie Fantastic Beasts: The Secrets of Dumbledore.

```

<div id="content">
  <div class="line-hor"></div>
  <div class="box">
    <div class="border-right">
      <div class="border-left">
        <div class="inner">
          <h3>Fantastic Beasts: <span>The Secrets of Dumbledore </span></h3>
          <div class="img-box1 alt">
          <br /><table class="film">
            <tr>
              <th scope="row">Original title:</th>
              <td>Fantastic Beasts: The Secrets of Dumbledore</td>
            </tr>
            <tr>
              <th scope="row">Genres:</th>
              <td>Adventure | Family | Fantasy </td>
            </tr>
            <tr>
              <th scope="row">Duration (min):</th>
              <td>143</td>
            </tr>
            <tr>
              <th scope="row">Language:</th>
              <td>English</td>
            </tr>
            <tr>
              <th scope="row">Release date:</th>
              <td>08/04/2022</td>
            </tr>
            <tr>
              <th scope="row">Certificate:</th>
              <td>AP-12 | Parental guidance for children under the age of 12</td>
            </tr>
            <tr>
              <th scope="row">Director:</th>
              <td>David Yates</td>
            </tr>
            <tr>
              <th scope="row">Cast:</th>
              <td>Mads Mikkelsen, Eddie Redmayne, Jude Law, Katherine Waterston, Ezra Miller, Dan Fogler</td>
            </tr>
            <tr>
              <th scope="row">Country/Year:</th>
              <td>USA 2022</td>
            </tr>
          </table>
          <strong><a href="https://www.imdb.com/title/tt4123432/?ref=rv_sr_srsrg_1" target="_blank">IMDb</a></strong>
          <p><br />Professor Albus Dumbledore knows the powerful, dark wizard Gellert Grindelwald is moving to seize control of the wizarding world. Unable to stop him alone, he entrusts magizoologist Newt Scamander to lead an intrepid team of wizards and witches. They soon encounter an array of old and new beasts as they clash with Grindelwald's growing legion of followers.</p>
          <iframe width="800" height="450" src="https://www.youtube.com/embed/Y9dr2zw-TX0" title="YouTube video player" frameborder="0" allow="accelerometer; autoplay; clipboard-write; encrypted-media; gyroscope; picture-in-picture" allowfullscreen></iframe>
          <div class="wrapper" style="margin-left: 0px"> <a href="filme.html" class="link2"> <span> <span>More movies</span> </span> </a> </div>
        </div>
      </div>
    </div>
  </div>
</div>

```

Inserting the movie poster

Adding the movie title

Adding the genre

Adding the duration

Adding the languages

Adding the release date

Adding the certificate

Adding the director

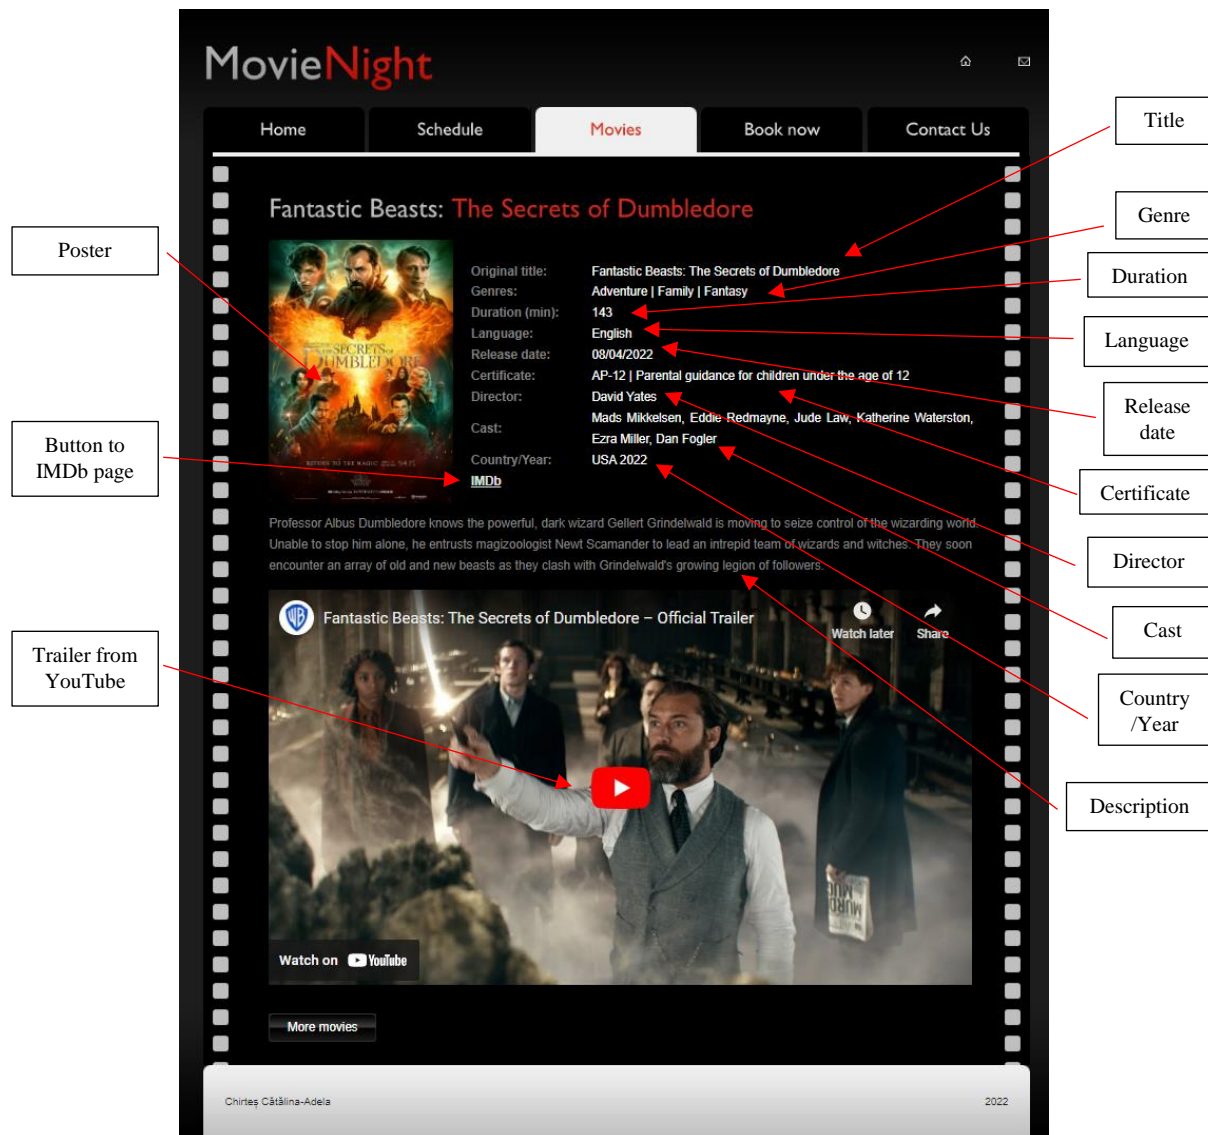

Adding the cast

Adding the premiere year and location

Adding the description

Creating the button to return us to the main Movies Page

Adding the trailer from YouTube on the page

3.7. Book now Page code

The reservation page is organized in 3 PHP files.

3.7.1. Rezervare.php

Rezervare.php gets the data selected by the user in the corresponding variables \$id_film, \$nume_film, \$id_limba, \$id_ora. We get the data by using the method GET/REQUEST combined with checking the database and the selection made by the user.

✿ 3.7.2. *Setting.php*

Settings.php contains the functions necessary for getting the needed data from the database(`getFilme()`, `getFilmLangById()`, `getFilmOraById()`, `dbConnect()`). The functions `getFilmLangById()` and `getFilmOraById()` use the ID of the movie selected with the method GET/REQUEST in the `Rezervare.php` file and returns the information from the database regarding the available languages and time slots for the selected movie.

```
function getFilmLangById($id=0){
    $mysqli = dbConnect();
    // GET ALL FILME
    $sql = "SELECT * FROM atlimba WHERE id_film = $id order by limba asc";
    $result = $mysqli->query($sql);

    $arrLimba = []; // ===== holds the result
    $cnt=0;
    if ($result->num_rows > 0) {
        // output data of each row
        while($row = $result->fetch_assoc()) {
            $arrLimba[$cnt]['limba'] = $row['limba'];
            $cnt++;
        }
    } else {
        // there are no results
    }

    $mysqli->close();
    return $arrLimba;
}
```

✿ 3.7.3. *Rezervare-submit.php*

Rezervare-submit.php uses variables of type SESSION in order to get the data obtained in the `Rezervare.php` file and sends the booking made by the user to the database.

```
$arrFilmLimba = $_SESSION["arrFilmLimba"];
$arrFilmOra = $_SESSION["arrFilmOra"];
$arrFilme = $_SESSION["arrFilme"];
$select_film = $_SESSION["id_film"];

$increment = 0;
foreach ($arrFilmLimba as $k => $v) {
    if ($increment == $select_limba) {
        $id_limba = $v['limba'];
    }
    $increment++;
}
```

3.8. Contact Page code

Below is attached the HTML and PHP code used for creating the Contact Page and the contact form.

```

<div class="box">
<div class="border-right">
<div class="border-left">
<div class="inner">
<div class="address">

3.10. Database Connection

Below is attached PHP code used for connecting to the phpMyAdmin database.

A connection example for the reservation form.

```
$id = isset($_POST['id']) ? $_POST['id'] : '';
$name=isset($_POST['name']) ? $_POST['name'] : '';
$telefon=isset($_POST['telefon']) ? $_POST['telefon'] : '';
$email=isset($_POST['email']) ? $_POST['email'] : '';
$nr_locuri = isset($_POST['nr_locuri']) ? $_POST['nr_locuri'] : '';

if (!empty($name) && !empty($id) && !empty($data) && !empty($name) && !empty($telefon) && !empty($email) && !empty($nr_locuri))
    $sql="INSERT INTO atrezervare (id,id_film,id_limba,id_ora,data,nume,telefon,email,nr_locuri)
        values('$id','$name_film','$id_limba','$id_ora','$data','$name','$telefon','$email','$nr_locuri')";
$result = $conn->query($sql);
if ($result == TRUE)
{
    echo $conn->error;
}

$conn->close();
?>
```
